

# Gekko Brain Flows for process visualization and Analysis

## The Client

The largest farm supply company in Europe based in Denmark and its subsidiary in Germany.

## Business Challenges

The parent company in Denmark and its subsidiary in Germany were planning a migration to S/4HANA and planned on a greenfield migration, consolidating the Danish and German SAP system in one S/4HANA instance. The challenge was to consolidate their two separate SAP systems into one SAP system post migration.

## Scope of Work

- Visualize existing SAP process flows differences and deltas across the two systems
- Identify custom code linked to the processes
- Understand the impact of merging to the separate systems for S/4HANA migration
- Determine whether Greenfield or Brownfield is the right approach for the migration

## Solution

They chose Gekko Brain FLOWS to analyze and visualize the businesses processes of the two separate SAP systems. In Gekko Brain the processes from the two systems were overlaid to show differences and deltas. Moreover, with Gekko Brain the processes were also linked to custom code to analyze S/4HANA simplification impact.

## Business Benefits

- Saved many months of work to mine the existing processes to understand the differences and similarity
- Figured out the custom code linked to the processes
- Made an informed decision to opt for brownfield migration when the initial choice was to go for the greenfield implementation. Hence, saved millions of dollars by avoiding a very costly mistake
